## Crime Prevention Through Environmental Design

In this course we will look at how the concepts of crime prevention, target hardening, and physical layout impact school campuses across California. This course will take you through the history of crime theories, crime prevention tactics, best practices, new technologies, and how to conduct crime prevention through environmental design audits yourself.

This course is designed for school emergency planners, risk managers, safety managers and security personnel. In this course we will provide you with practical information which can be applied to your school and the low-cost manner. In addition we will provide you with templates which may be customized for your particular level of expertise in conducting audits.

Steve Wilmes is a loss control expert who specializes in school safety and security issues. Steve has eight years of direct experience with more than 140 school districts in the state of California. Steve has assisted many firms in developing their CPTED audits for school districts and takes great pride in ensuring that recommendations are practical and can be implemented by school personnel. Steve has practiced loss control and risk management for more than 20 years in private and public entities, including Fortune 500 companies such as Mutual of Omaha and Countrywide.
